Office Action Summary

Art Unit: 3624

**DETAILED ACTION**

1. Claims 1-22 have been examined.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-22 are rejected under 35 USC 112(1st paragraph) for failure to specifically delineate how to enable the applicant's invention and realize the best mode of operation.

Applicant is requested to describe in sufficiently precise detail how the invention is to be utilized in the Figures and Specification beyond what has been submitted.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-22 are further rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically, applicant is requested to define the evolution of the mathematical concepts in sufficiently clear detail as to permit one to evaluate what he regards is the disclosure. This includes the precise calculations of the table(5), the nature of the irreversible function(OWF), the calculation of the secret key(K) by algorithmic delineation, the

calculation of the distinctive sign (Imcr), a first result (O\_AC\_I) of the irreversible function, processed result (AC\_I) of the first algorithm(MAC) together with mathematical description of the secret verification key(SVK) and description of the dynamic parameters(CDP) of the cheque, as well as description of the second iteration transformation, the methodology of the pseudo random estimation by the device (3), the result (AC\_I) and the base values  $S(1) \dots S(k)$ , comparison process of the distinctive sign (Imcr) and a verification in the device(3) of the second result (AC\_C), the discussion of the equality condition for acceptance and discussion of the summing conditions for odd or even products of numbers,  $n, k$  together with discussion of the digital signature (SIGNcr). Also requested is a discussion of the verification of the authenticity of the certificate by another public key (Pks) as well as the precise mathematical algorithm being employed with discussion of the limitations, assumptions, and applicability of the formulation.
